ON THE COVER

The evolutionarily conserved interaction between particular SBP-box genes and miR156 is known to play a key role in the floral transition. The data presented by Xing et al. (pages 3935–3950) show another essential role for this interaction in sexual reproduction, specifically, in the process of microsporogenesis in anthers. The cover image shows the expression pattern of a GUS reporter gene driven by the *MIR156H* promoter region (cyan) in a top view of an *Arabidopsis* inflorescence apex.

IN BRIEF

- Auxin Binding by SKP2A Activates Proteolysis of Downstream Cell Cycle Regulators and Promotes Cell Division** 3877
Jennifer Mach
- The Nuclear Pore Complex in *Arabidopsis*** 3878
Nancy A. Eckardt

REVIEW

- Form, Function, and Regulation of ARGONAUTE Proteins** 3879
Allison Mallory and Hervé Vaucheret
