**ON THE COVER**

Impaired *AP1/FUL* activity affects leaf, flower, and fruit development in tomato. Burko et al. (pages 2070–2083) show that tomato *AP1/FUL* genes are negative targets of CIN-TCP transcription factors in leaf development. The cover shows the leaf, fruit, and flower phenotypes of tomato plants expressing a dominant-negative form of the tomato *AP1/FUL* gene *MBP20*, in comparison to a wild-type leaf and flower.
