**ON THE COVER**

Guo et al. (pages 3112–3127) show that the WRKY transcription factor WRKY71/EXCESSIVE BRANCHES1 (EXB1) plays a pivotal role in shoot branching in Arabidopsis by regulating other key transcription factor genes (*RAX* genes) and auxin signaling. The cover picture shows a 55-d-old *exb1-D* Arabidopsis mutant, which produces many branches. *exb1-D* is an activation tagging mutant in which the *WRKY71/EXB1* gene is overexpressed, resulting in the excessive branching phenotype.
