

Supplemental Figure 2: Median log₂-transformed enrichment ratios (F635:F532) for replicate spots in each of the four PPR4 RIP-Chip experiments plotted against fragment number; fragments are numbered according to chromosomal position. For the underlying data see Supplemental Table 1. Replicate experiments involving stroma from wild-type chloroplasts (WT 01 and WT 02) and *ppr4-1/ppr4-2* mutant chloroplasts (ppr4 01 and ppr4 02) used antibody from two different rabbits.
