

Supplemental Figure 5

Supplemental Figure 5. Co-localization of Nt-PLC3 and DAG in growing pollen tubes. Single central confocal sections through a transiently transformed tobacco pollen tube lying flat on the cover slip surface, which show the distribution of co-expressed Nt-PLC3:YFP (A) and Cys1:mRFP1 (B) 6 hours after gene transfer. The figure is representative of 15 similar sets of images collected in two independent experiments (scale bar: 10 μ m).
