

Supplemental Movie S1. Depolymerization of Preformed Microtubules. Dynamic imaging of microtubule-alone depolymerization was recorded at 10 s intervals for 10 min using a TIRFM assay.

Supplemental Movie S2. MDP25 Induces Microtubule Depolymerization. Dynamic imaging of microtubule depolymerization in the presence of 80 nM GST-MDP25 was recorded at 10 s intervals for 10 min using a TIRFM assay.
